Airtel Money-Style Python Application

This is a practice/simulation program. It does not connect to the real Airtel Money system. It demonstrates deposit, withdrawal, balance retrieval, and password changing.

Python Code

```
balance = 0
password = "1234"

while True:
    print("\n===== AIRTEL MONEY =====")
    print("1. Deposit")
    print("2. Withdraw")
    print("3. Check Balance")
    print("4. Change Password")
    print("5. Exit")

    choice = input("Choose an option: ")

    if choice == "1":
        amount = float(input("Enter amount to deposit: "))
        balance += amount
        print(f"Deposit successful. New balance: K{balance:.2f}")

    elif choice == "2":
        amount = float(input("Enter amount to withdraw: "))

        if amount <= balance:
            balance -= amount
            print(f"Withdrawal successful. New balance: K{balance:.2f}")
        else:
            print("Insufficient balance.")

    elif choice == "3":
        print(f"Your balance is: K{balance:.2f}")

    elif choice == "4":
        old_password = input("Enter current password: ")

        if old_password == password:
            new_password = input("Enter new password: ")
            password = new_password
            print("Password changed successfully.")
        else:
            print("Incorrect password.")

    elif choice == "5":
        print("Thank you for using Airtel Money.")
        break

    else:
        print("Invalid option.")
```
